

Kanchan Pradhan

W/o: Panchanna Pradhan

Vill: Ogalpur, Dist: Puri

Age: 40 Years

TOD: PWMI

Kanchan is 40 years old. She lives in Ogalpur village of Puri District. She was the second child of her parents. She has 5 brothers and sisters in all. Her parents got her married to Panchanna Pradhan of Ganeswar village. Her husband had 4 brothers. After her marriage they got separated. Her husband is a farmer. After 1-2 years of marriage only Kanchan's mental problem started. She started scolding her husband, suspects him, and always quarrels with him. Her husband brought her to Ogalpur village. There she was blessed with a daughter. There was nobody to take care of the baby girl. Lastly her mother and sister helped her. Kanchan stays all alone in a room. She doesn't do her activities of daily living skills like bathing, brushing, changing clothes, eating, combing her hair, cutting her nail, cooking food and also did not look after her daughter. Everybody tease her calling mad, insane etc.

Between these days her parents also expired. Her elder brother in law divorces her sister so she took all care of Kanchan. She takes her to different medicals for treatment but Kanchan does not take medicines prescribed to her and also use slangs to scold everybody.

She was given medicine support. Her behavior is changing day by day. Now-a-days she does not use slangs to people coming to their house. She is able to mix with others and behaves properly with them. She welcomes guests coming to their house. She is recovering now. She is able to do some of the household works like cooking food independently. She is very cooperative and helps anyone in need. She attends the functions held in the village. She also attends the marriages of their neighbors and they accept her in the functions which they did not use to do it before. Now everyone mixes with her and allows her in all their social activities. She does all the work allotted to her without any hesitation. Now-a-days, she looks after her daughter and takes proper care of her. Her family is very happy to see these remarkable changes in her life and they expect that she will definitely lead a normal life in future. They thank the donor for the cause they are supporting her. As per the doctor's advice medicine has to continue for long so medicines are being given regularly to make her lead a normal life. Now-a-days nobody teases her calling mad, insane etc which they used to do it earlier.
